

Construction of upgrades and improvements to Water Treatment Plant (Contract #1) and Water Main Extensions (Contract #2) in the Borough of Woodbine with an estimated total construction cost of \$3,986,730 were financed by the New Jersey Water Bank (NJWB). The NJWB is a State Revolving Fund program jointly administered by the New Jersey Department of Environmental Protection (DEP) and the New Jersey Infrastructure Bank (Infrastructure Bank) and uses a combination of funds provided by the United States Environmental Protection Agency, the DEP, and the Infrastructure Bank to provide very low interest loans to borrowers for environmental infrastructure projects.

This project will provide water quality benefits by upgrading the aging water treatment components that are beginning to fail; extending water mains along Fidler Hill Road that will provide public water service to properties currently using POET treatment systems on private wells; and completion of a looped water system at the Municipal Airport to eliminate a dead-end water main, all of which will benefit residents and businesses in the Woodbine Water System service area.

State Revolving Fund programs around the nation provide states and communities the resources necessary to maintain and improve the infrastructure protecting our valuable water resources nationwide.
